PROFILE

Freelance fullstack developer with real projects in production: a multitenant restaurant SaaS with AI, a clinical system with a paying client, and an exam simulator in active use at the University of Guayaquil. Experience across the full cycle — backend, frontend, mobile, deployment and automation. Ninth-semester Software Engineering student at the University of Guayaquil.

TECHNICAL SKILLS

Backend	Python, Django, FastAPI, Node.js, Express, C#, Java
Frontend	React, Next.js, TypeScript, Tailwind CSS, Vite
Mobile	Flutter, Dart, Riverpod, Firebase
Databases	PostgreSQL, SQLAlchemy, Firebase Firestore, MySQL
DevOps / Tools	Git, Docker, Linux, Railway, VPS, Cloudinary
Cybersecurity	Kali Linux, Metasploit, Nmap, Wireshark

EXPERIENCE

EcuaiInventario2024 — present

Co-founder · Fullstack Developer · Guayaquil

- Multitenant restaurant SaaS with integrated AI, co-developed with a business partner.
- Backend in Django 5 + DRF + PostgreSQL with a multitenant architecture — each tenant's data fully isolated.
- AI chat that interprets text, audio and invoice photos using Claude Haiku (Anthropic) + Whisper (OpenAI).
- Flutter + Riverpod mobile app for real-time inventory and order management.

Freelance2023 — present

Fullstack Developer · Remote, Guayaquil

- Centro Médico Tía Glenda: complete clinical system with 190+ components in React + MUI. Paid client, in real use.
- Flores Eternas: e-commerce with electronic invoicing integrated with Ecuador's SRI tax authority — XML generation, digital signature and SOAP submission (Node.js + React + PostgreSQL).
- Facturador: my own invoicing and order management system in production at novamicktools.com (FastAPI + React + PostgreSQL).
- SimuladorPreguntas: exam simulation platform with anti-cheating, roles and XML/Excel export. In production at the University of Guayaquil.

Leveling Department — University of Guayaquil2025 · 6 months

Intern · Software Development

- Led the full development of SimuladorPreguntas: frontend, backend, testing and deployment on the institutional VPS.
- Bulk renaming script: processed in 5 minutes what used to take a full afternoon per group (70+ files).
- DHCP network script: automated connectivity resets, removing the department's dependency on tech support.

FEATURED PROJECTS

mcp-context-servergithub.com/Mickaell22/mcp-context-server

My own MCP server that indexes GitHub repositories with embeddings in PostgreSQL and queries them in natural language. DeepSeek Flash as a preprocessor to compress context. Secure operation over Tailscale. Publicly distributed.

Python · PostgreSQL · DeepSeek · Tailscale

SimuladorPreguntasgithub.com/Mickaell22/SimuladorPreguntasBackend

Exam simulation platform in production at the University of Guayaquil. Admin/student roles, anti-cheating, bulk import from Excel/XML, results history.

Node.js · Express · PostgreSQL · React · Docker

Facturador novamicktools.com

My own invoicing, orders and statistics system in active use. Soft delete on all entities, images on Cloudinary, revenue dashboard by period.

FastAPI · React · PostgreSQL · Cloudinary

EcualInventario

Multitenant restaurant SaaS with an AI chat to log inventory movements via text, audio and invoice photo. Almost in production.

Django · Flutter · PostgreSQL · Claude API · Whisper

MotoVox github.com/Mickaell22/Proyecto-MotoVox

P2P motorbike intercom over local WiFi. RNNoise compiled in native C for ARM64 integrated into Flutter via FFI — real-time engine noise filtering.

Flutter · Dart · C (ARM64) · WebRTC · FFI

EDUCATION

Software Engineering 2021 — present
University of Guayaquil · 9th semester

High School Diploma in Sciences 2015 — 2020
Unidad Educativa Leonidas Gracia

CERTIFICATIONS

Certified Ethical Hacker (CEH)
Hacker Mentor · March 2023

Google Cybersecurity
Coursera · Foundations completed, 2025
